Spatial components of sustainability in UK beef and sheep farming

University of Reading

PhD Student George Vittis

Supervisors: Simon Mortimer,

Yiorgos Gadanakis

My Research area, aims and objectives

Research area:

Agricultural economics

Core Aim of the study:

Sustainable development of the Less Favoured Areas (**LFAs**) of the UK

Goals:

Environmental quality

Economic wealth

Social robustness

Attending the Business school

The first research **goal** of the *Valuing Nature* programme is in line with the core objectives of my research

Application of the **Tipping points** theory: Finding the appropriate **balances** between the three dimensions of sustainability within agricultural production

Challenges and Opportunities

The political consensus (post Brexit) calls for **rethinking** the **policies** and **strategies** related to the **development of agriculture**

It is challenging to combine such a **multifaceted phenomenon** with **businesses' incentives**

However, the latter will be able to deliver beneficial outcomes for developing the LFAs sustainably

Thank you !
