Valuing Nature

The Roots of Transformation

Rob Fish, social scientist and human geographer, University of Kent, UK

Holly McKelvey, illustrator and visual science communicator, Lübeck, Germany

Set around the premise of a 'motley' group of undergraduates endeavouring to complete a university assignment on 'nature in the modern world' the book explores:

- the many and diverse meanings people assign to nature
- the different ways the relationship between people and nature might be characterised
- the many values systems people hold for the natural world
- the options and approaches society can deploy to manage it
- the extent to which we need entirely new economic systems to protect and sustain nature.

This highly interdisciplinary book invites consideration of a range of philosophical and applied debates and questions. Written in an accessible style, it is an ideal undergraduate text in the fields of ecology, human and physical geography, conservation science, environment, social science and spatial planning, as well as a general primer for graduate natural and social scientists embarking on interdisciplinary research in the natural resource management arena.
