

# VALUING NATURE

Valuing the health benefits of green infrastructure improvements for making life better at Musgrave Park Hospital

Marios Zachariou – PhD  
student at Queen’s University  
Belfast

# What is my project's research orientation?

A multidisciplinary project: Environmental Economics, Health Economics, Environmental Psychology

# Why attending the BIS school is important to me:

- To get an insight of what businesses stakeholders take into main consideration when investing in research.
- To get necessary tips on how to address impact in my research project.
- To create connections.

# A great opportunity with a major challenge

- **The opportunity** – To having been granted the responsibility to be working on a project whose results will be taken into consideration in public policy making and affect the life of hundreds of people.
- **The challenge** – To provide meaningful and statistically significant results that can be used as evidence of the need for green infrastructure improvements in hospital outdoor grounds and serve as a protocol for future similar interventions.
